

Tests with

QUEMDIZ P IMPRIMACIONES

on rosettes of aircraft fuselages

QUEMDIZ S.L.

Industrial Detergents

- The product is applied evenly across the surface to be pickled.

- After 20 minutes, it is observed that the product begins to form classical blistering paint. Keep surface with product until the paint has been lifted.

- After 5 minutes the rosette, where the product had been applied, starts to detach the entire primer and paint layers thereof, leaving completely clean the metal structure.
